

# GALVANIZED LOWBOYS

## SUPERIOR CORROSION RESISTANCE

Galvanizing protects your trailer from corrosion, enabling it to withstand harsh weather and road conditions. Galvanizing also provides additional surface strength for excellent abrasion resistance. Most scratches will self-repair to seal out the elements with minimum maintenance.

## STEEL + ZINC = DURABILITY

The hot-dip galvanizing process submerges the steel trailer into hot zinc, which creates a molecular bond between the zinc and steel – leaving you with a durable barrier between the elements and the steel. Paint can also be applied on top of the galvanized surface to further increase protection.

INCREASED RESALE VALUE

EXTENDED TRAILER LIFE

5 YEAR WARRANTY ON CORROSION RESISTANCE
