

# New Universal Port-A-Ring from B/A!

## Product Features & Benefits

- Quickly and easily fits into any key slot on most carrier beds (For use with **Steel Beds Only**)
- Easy to install - just drop in and slide securely into the key slot.
- Spreads the load more evenly across the key slot, helping to prevent deformation of the slot
- Can be attached to chain binders for a quick and easy way to hookup
- WLL: 6,600 lbs.

The **Port-A-Ring** is designed to fit in the "key" slot holes on the front, side and rear of a carrier bed. The base fits in the hole of the bed and then the slotted keyway fits into the chain pocket. This leaves only the D ring on top of the bed and creates an extra way of connecting a hook, snatch block, chain or strap to the carrier bed. This universal design works with **STEEL BEDS ONLY**.

Part# PR-1

WLL: 6,600 lbs.
