

# 2019

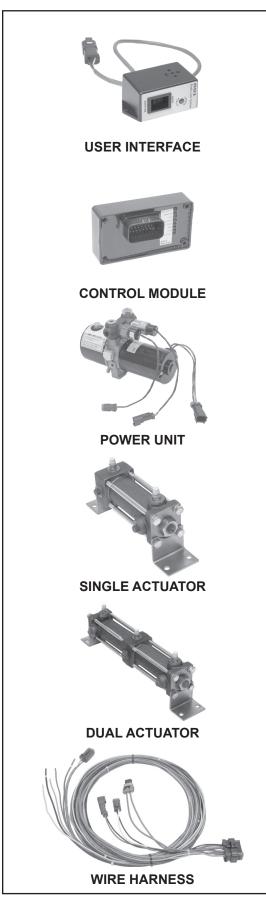

In addition to a well maintained and adjusted mechanical parking brake, experience has shown that in many uses, additional supplemental holding is necessary. This can be done in the form of wheel chocks, outriggers, or other means to keep all wheels that are in contact with the ground from moving.

MICO<sup>®</sup> Hydraulic Brake Locks are ideal for use on vehicles with hydraulic brake systems. Typical uses are in the construction, mining, forestry, agriculture, material handling industries, multi-stop delivery vehicles, and recreational vehicles, such as motor homes and off-road 4-wheel drives.

All MICO<sup>®</sup> Brake Locks are for supplemental brake holding and are to only be used in conjunction with a vehicle's properly functioning mechanical parking brake. The brake locks use the vehicle's service brakes as an operational supplement to the parking brakes and are not intended to be used as the primary parking brake or to be used for prolonged parking.

Several types of brake locks are available for use in single, dual, split, or anti-lock brake systems. The type of brake system on the vehicle will determine which brake locks can be used. If you have questions about selecting the proper brake lock, please contact MICO.

## **BRAKE LOCK PRODUCT LINE**

## 691 Brake Lock System

691 Brake Lock Systems lock hydraulic pressure in the service brakes to supplement the vehicle's original equipment parking brake and provide extra holding in heavy-duty and high frequency applications. These systems also function as an interlock to apply pressure to the service brakes when other vehicle mounted equipment is being used.

The 691 System consists of a small electrohydraulic pump, remote mounted actuator (single and/or dual), electronic control module, and a small dash mounted user interface. The operator simply activates a switch, and the 691 System automatically applies, monitors, and maintains brake-locking pressure.

A 691 Brake Lock will significantly enhance vehicle holding capability while not interfering with normal service brake function.

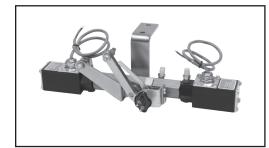

All MICO<sup>®</sup> 691 Brake Lock Systems are for vehicles using Brake Fluid type braking systems.

#### MODELS:

02-691-101	Single Brake Lock System (for vehicles over 19,000 GVM)
02-691-109	Single Brake Lock System (for vehicles under 19,000 GVM)
02-691-201	Dual Brake Lock System (for vehicles over 19,000 GVM)
02-691-209	Dual Brake Lock System (for vehicles under 19,000 GVM)
02-691-303	3-Channel Anti-Lock Brake Lock System (for vehicles over 19,000 GVM)
02-691-305	3-Channel Anti-Lock Brake Lock System (for vehicles under 19,000 GVM)
02-691-403	4-Channel Anti-Lock Brake Lock System (for vehicles over 19,000 GVM optional on others)

#### NOTE: 691 Power Unit uses silicone fluid. See page 14 for 691 Models and Sub-Components.

# **BRAKE LOCK PRODUCT LINE**

## **Dual Cable Lock**

Dual Cable Locks are cable operated and are designed to supplement a vehicle's original equipment parking brake by utilizing the hydraulic service brakes of a vehicle equipped with a dual or split braking system. Dual Cable Locks can provide 4-wheel lockup for hydraulic dual brake systems or rear wheel ABS, as well as 2-wheel lockup for hydraulic 3 and 4 channel ABS. Each Dual Cable Lock includes two low pressure warning switches.

#### MODELS:

02-640-169	Includes - 3/16 and 1/4 inch fittings, 10 ft. cable - (BF)
02-640-202	Includes - 3/16 and 1/4 inch fittings, 10 ft. cable - (HO)

#### **Lever Lock**

Lever Locks are designed to supplement a vehicle's original equipment parking brake by utilizing the hydraulic service brakes. Lever Locks are manually operated one-way check valves which lock fluid under pressure in the selected brakes. Hand operation leaves the operator's feet free for clutch and throttle pedal operation. Each Lever Lock includes a low pressure warning switch.

#### MODELS:

02-640-125	Includes - 3/16 and 1/4 inch fittings - (BF)
02-640-126	Includes - 3/16 and 1/4 inch fittings - (HO)

#### **Twist Lock**

Twist Locks are functionally the same as lever locks. The differences being a Twist Lock has a rotary action handle and the push rod is sealed and lubricated with silicone grease for tough environmental applications. Each Twist Lock includes a low pressure warning switch.

#### MODELS:

**03-640-075** Includes - 3/16 and 1/4 inch fittings - (BF) **03-640-076** Includes - 3/16 and 1/4 inch fittings - (HO)

#### Cable Lock

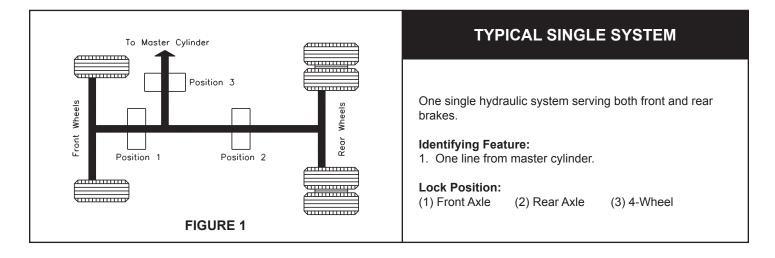

Cable Locks are functionally the same as lever locks and twist locks. The Cable Lock is for use in applications where there is limited space under the dash or in the cab. The lock is mounted in a remote location and operated by a cable and knob that is accessible to the operator. Each Cable Lock includes a low pressure warning switch.

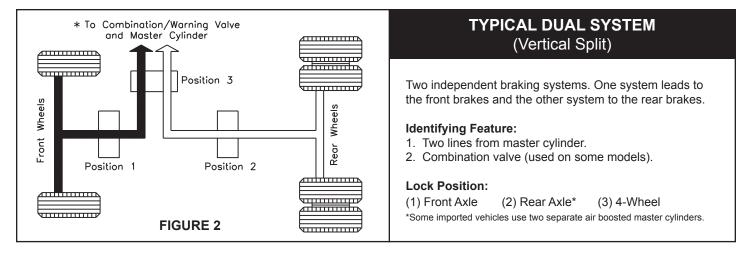

#### MODELS:

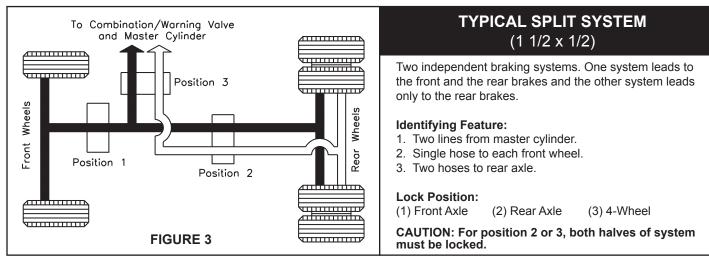

**02-640-023** Includes - 3/16 and 1/4 inch fittings, 10 ft. cable - (BF) **02-640-122** Includes - 10 ft. cable - (HO)

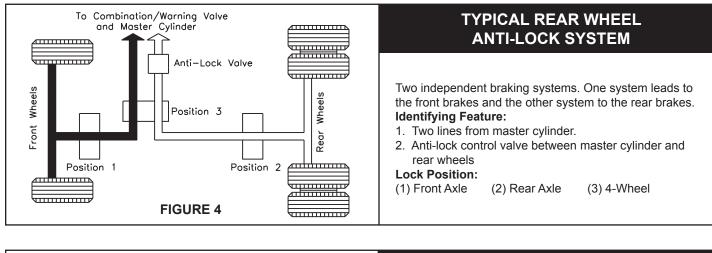

# DIFFERENT BRAKE SYSTEMS

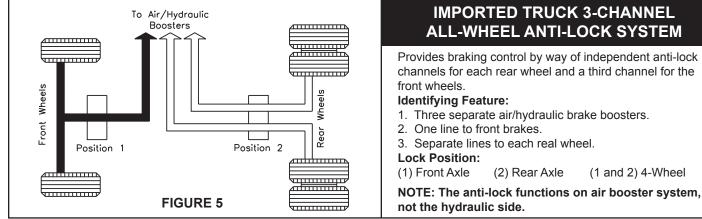

Typical hydraulic braking systems in use today vary depending on manufacturer and size of vehicle. For instance, a vehicle equipped with a single system may have a firewall mounted booster or possibly a frame mounted remote booster. The same holds true for the dual and split systems. The rear wheel anti-lock system is a dual brake system with an anti-lock valve installed. All-wheel anti-lock systems are defined as 3-channel or 4-channel systems (check the number of outlet lines from the anti-lock control valve). To be absolutely sure with which braking system your vehicle is equipped, check it. Look for identifying features such as dual flex lines at rear axle or front wheels, number of master cylinder lines, antilock valve(s), etc. Then, compare with circuits shown here.

♣ 02-600-038 Remote Reservoir Kit recommended if power unit is mounted on frame rail (See page 14)

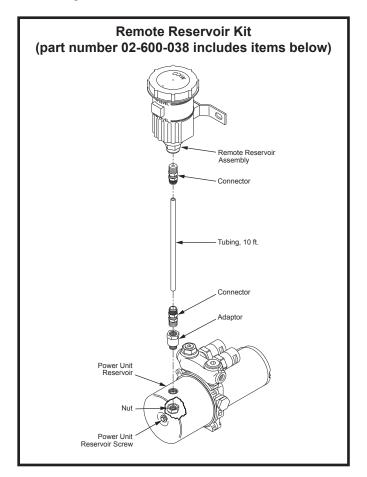

#### NOTE

1999 was a transition year to ABS systems on most imported trucks. If a 1999 model does not have ABS, use the 1998 recommendations. Use the 2000 recommendations for trucks having ABS.

#### **Remote Reservoir**

For use in brake fluid applications

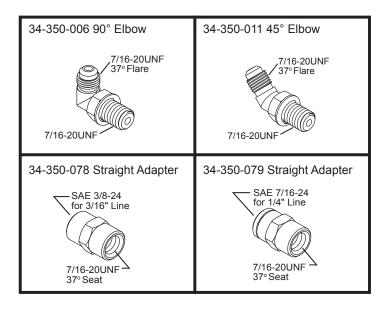

MICO offers a remote reservoir kit (part number 02-600-038) for installations where the 691 Power Unit brass breather plug cannot be mounted in an upright position away from dust and dirt, or when visual monitoring of fluid level is desired.

#### 691 MODELS AND SUB-COMPONENTS

#### **Elbow Fittings and Straight Adapters**

Simplify plumbing installation using 90° or 45° elbows and straight adapters available from MICO. These fittings allow more direct routing of brake tubes with fewer bends and are handy when mounting components in close quarters.

#### Wire Harness Extension

The 11 ft. supplemental wire harness (part number 31-820-022) simplifies wiring when the 691 Control Module is mounted away from the 691 Power Unit. Uses waterproof adapters for quick connection of the control module and power unit leads.

System Model Number	Description	Power Unit	Control Module	Actuator	User Interface	Main Wire Harness
02-691-101	Single (1 3/4 in. bore)	20-410-014	29-585-001	20-460-013	32-585-007	32-820-021

\*\* Consists of two 1 1/4 inch diameter single actuators.

\*\*\* Consists of one 1 3/4 inch diameter single actuator and one 1 1/4 inch diameter dual actuator.

\*\*\*\* Consists of one 1 1/4 inch diameter single actuator and one 1 1/4 inch diameter dual actuator.

\*\*\*\*\* Consists of two 1 1/4 inch diameter dual actuators.

## **A**WARNING

- 1. All MICO Brake Locks are **supplemental** safety equipment which provide additional brake holding action **when used with existing vehicle parking brake**.
- The Low Pressure Warning Switch must be used in combination with an audible and/or visual alarm to signal any loss of system pressure. The Low Pressure Warning Switch is explained in the Operating Instructions. **Do not disconnect Low Pressure Warning Switch** (does not apply for 691 Brake Lock System).
- 3. The 691 System must be used in combination with an audible and/or visual alarm to signal any loss of brake system pressure. **Do not disconnect vehicle horn/visual alarm or 691 Control Module alarm.**
- 4. All lines, fittings, and adjacent areas must be cleaned of dirt or road residue before any lines or fittings are disconnected. Special care should be taken so dirt and road residue are not allowed to enter hydraulic brake system. This could contaminate the system and interfere with proper operation of brakes and MICO locking devices.
- 5. Follow procedures outlined in Vehicle Manufacturer's Service Manual or SAE Standards when making new connections or adding to existing brake systems. Use only steel brake tubing conforming to SAE specifications.
- 6. Use only proper system fluid conforming to latest SAE or DOT Standards. Improper or contaminated fluid may cause gummy deposits and softening and swelling of other rubber seals in the entire brake system. Such a condition must be corrected immediately.
- Do not use sealants, tapes, teflon or cement compounds on any connections or fittings. The sealants or compounds can contaminate the hydraulic brake system and interfere with the operation of the brake components or MICO locking device.
- 8. All fittings and connections must be in good condition and tightened to proper torque values as specified in the Installation and Service Instructions.
- Separate models numbers of MICO Brake Locks are available for brake fluid and for mineral based hydraulic oil. Select a model number that conforms with the type of fluid in the system.
- 10. Brake hoses, brake lines, MICO locking device, brake components, cylinders and all fittings must be routinely inspected for leaks, damage or wear. Adequate fluid levels must be maintained. In the event of any loss of fluid, brake system must be carefully inspected for leaks.
- 11. After installation, bleed system according to vehicle manufacturer recommendations.
- 12. Follow INSPECTIONS and TESTS section as outlined in the Operating Instructions.
- 13. The self-adhesive warning(s) accompanying each MICO locking device must be affixed in cab in view of operator.
- 14. The Operating Instructions must be placed in cab of vehicle in a location available to the operator.
