

Zips Rear Carrier Tool Box Kit

ZP-RCTB-KIT

The ultimate solution for the lack of storage on a Miller Car Carrier

Maximize your storage and enhance the functionality of your Miller car carrier with the Zips Rear Carrier Tool Box Kit. Specifically designed to seamlessly bolt onto the rear subframe of any newer Miller car carrier, this kit is fully compatible with the 16, 12, and 10 series models. It integrates effortlessly with all control station configurations, as well as air-free spools mounted to the control housing.

Crafted from durable aluminum, the toolbox requires no modifications or drilling into the subframe for installation. The 28" W x 24" D x 20" H box features a sleek stainless steel door with a single, compression-locking latch for secure closure. A convenient 4" x 4" notch at the top rear of the box provides clearance for the bed anti-tilt plate, ensuring a perfect fit.

Installation is simple and hassle-free: only a few holes are needed to attach the box to the mounting bracket and to secure it to the tail light housing on the subframe, ensuring added stability. This kit allows for standard or customized mounting, and when equipped with shelves, it offers an ideal solution for storing the CD-Q Collins Car Carrier Dolly system.

Each kit includes two tool boxes and two mounting brackets, providing a complete, durable, and space-efficient storage solution for your Miller car carrier.
