

Pivoting Center Post Mount

#EZC-SCPM | Engineers at EZ Claw have developed a shorter version of the **Center Post Mount (CPM)** to accommodate shorter wheelbases common to day cabs and to address additional line support for trailers with hydraulic hoses. Featuring a rotating head, the new **Pivoting CPM stands just 44" tall**, compared to the 72" height of the standard CPM. This shorter version can still support multiple tensioners and accessories but can be **mounted closer to the frame rails**, thus shortening the lines and providing safer hose access for the driver from the ground. Like the standard CPM, the pivoting CPM still mounts to the frame rails, and the **swivel head rotates 100° from side to side to allow for greater hose travel**.

Product Specifications

Benefits

Line Clearance

Pivoting CPM can be installed in various locations on the catwalk. The shorter design and pivoting head enable shorter, more efficient hose runs between the tractor and trailer.

Swivel Head

Pivots up to 100° (50° either direction) to allow stainless steel cable to remain centered in the roller guide during sharp turns.

Integrated Alignment

Rotation allows stainless steel cable to travel in line with the supported hoses, reducing friction on the cable at the connection point.

Safer, Easy Access

Drivers and technicians can reach line connections from ground level. No need to climb onto the catwalk to release lines, eliminating trip and slip hazards.

Prevent DOT Fines

Maintain compliance by keeping your lines supported above the catwalk.

Bolt-on Installation

Bolts directly to frame rails. No drilling required. Installation hardware included.

Weatherproof Construction

Stainless steel components have been salt spray tested to withstand corrosion.

Low Profile

Shorter height improves driver visibility when backing and monitoring trailer from the rear window.
