Versa 6, 7 and 9 Series Functions

- Connect the red wire to 10-33 VDC and extend the black wire to the ground post to activate the product.
- For warning light color 1, connect the brown wire.
- Connect the blue wire for warning color 2.
- Connect the pink wire for reversing light.
- Connect yellow wires of all heads together for synchronization.
- To change flash patterns, apply the yellow wire to +VDC for less than 1 second and release.
- Flash patterns will be reset when yellow wires are connected to RED wire for more than 5 seconds. This override sequence only applies to Versa 6, 7 & 9 models.
- With the power off, connect the white wire from one lighthead to +VDC and leave the other disconnected. Their patterns will alternate when the lightheads are activated.
- To engage brake mode/turn signal/position light, connect the orange/gray/purple wires to the corresponding signal wires of the vehicle.

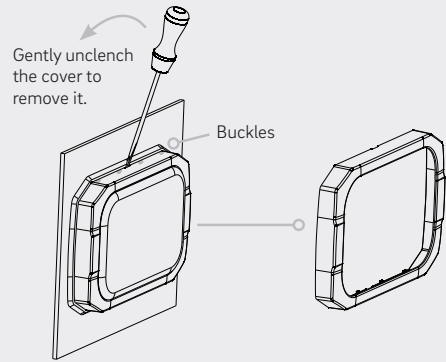

Versa 6, 7 and 9 Series Override Sequence

- Turn signal overrides all functions.
- Reversing light overrides warning lights.
- Brake mode overrides reversing light.
- Position light has the lowest priority.
