MILLER INDUSTRIES EXCLUSIVE

5-INCH WIDE HEAVY-DUTY TOWING FORKS

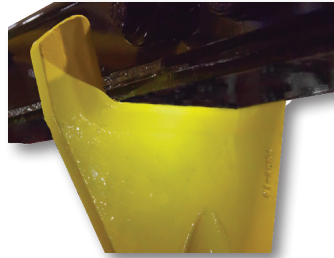

**FROM THE LEADER IN
TOWING & RECOVERY EQUIPMENT**

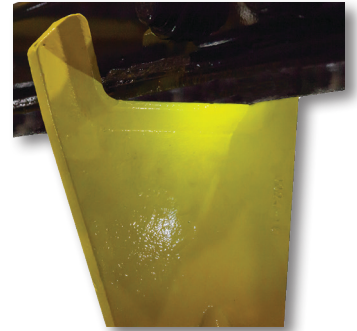

**AVAILABLE IN
MULTIPLE SIZES:**

SHORT
Part# 0200019W

MEDIUM
Part# 0200021W

TALL
Part# 0200023W

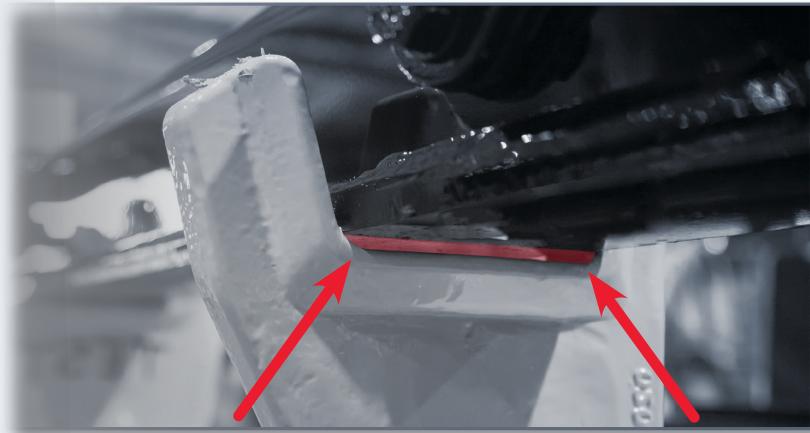

KEY BENEFITS:

- ACCOMMODATES NEW WIDER AXLE PLATFORMS
- REPLACES OTHER FORKS & CAN BE USED WITH EXISTING EQUIPMENT
- REMOVES THE POINT LOAD MOMENT WITH ***NO MORE GAP!***

Miller Industries worked directly with axle and chassis OEM manufacturers to revamp the current version of the popular towing fork to meet the new wider axles found on newer over-the-road LTL truck chassis. The updated towing forks are fabricated with a wider base (throat) than the industry standard 4.5-inch towing fork.

This new wider 5-inch towing fork makes it so that all three of versions (short – medium – tall) are no longer put in a “point load moment”, because the base of the axle now sits in the girth (base) of the fork. This 5-inch wide fork will become standard replacing the previous version fork on all 20-ton and above units, and also available as an option on all smaller units or for individual orders.
