**Model  
1800**

Diagram shows typical engineering components. Individual power packs may differ in features and number of batteries.

Flexible all copper welding cable, the longest leads in the industry - get to batteries in hard to reach places

Let's get down to business. You want a portable power pack that packs a big punch, you can carry it on a service call to save time, has plenty of reserve power to start cars all day long, has cables long enough so you don't have to balance the thing on a fender, and it's built to professional standards so you know it will last.

The answer is the Rescue 1800. It packs a punch 4,000 peak amps big because it has two 20AH sealed AGM batteries inside. It delivers that current through 2 gauge all-copper welding cables that are over 5 feet long and connected to coated parrot clamps. It has a worklight/flasher, a built-in charger, and a polarity alarm. There's a 12V power outlet that you can also use with our in-cab charging cord to keep your Rescue 1800 at full charge if you're using it in a roadside service vehicle and storing it in your cab.

Lots of power to start things. Legendary reliability. Professional quality.

It's all about getting down to business.
